Professional Summary

Final-year Automation and Robotics Engineering student with hands-on project experience building full-stack applications, REST APIs and automated data pipelines. Worked with relational and NoSQL databases, authentication, schema validation and automated testing. National finalist at Hack Celestial 2.0, with technical event coordination experience supporting a national hackathon.

Education

Vivekanand Education Society's Institute of Technology, Mumbai 2023 – 2027 (Expected)
B.E. in Automation and Robotics Engineering **CGPA: 7.43/10.0**
Relevant Coursework: Data Structures and Algorithms, Database Management Systems, Machine Learning, Generative AI

Technical Skills

Languages: Python, SQL, JavaScript, TypeScript, C++
Frontend: React, Next.js, HTML5, CSS3
Backend & APIs: Flask, Node.js, Express.js, REST APIs, Pydantic
Databases & Platforms: PostgreSQL, MongoDB, Firebase Firestore, Supabase
Testing: Pytest, Jest, Playwright, unit testing, integration testing, end-to-end testing
Security & Reliability: JWT authentication, role-based access control, audit logging, error handling, debugging
Developer Tools: Git, GitHub, GitHub Actions, Postman, Vercel, Render

Projects

Department Ledger Portal – Academic Records System Live Demo | GitHub
Next.js, React, Firebase Firestore, Jest, Playwright

- Built an academic records portal with separate student, faculty and administrator workflows for record compilation and portfolio management.
- Implemented role-based access control, audit logging and document autofill using parsed data.
- Wrote 199 Jest unit tests and 27 Playwright end-to-end tests to validate application logic and user workflows.

Edvanta – AI-Assisted Learning Platform Live Demo | GitHub
Python, Flask, React, MongoDB, Firebase, Pydantic

- Designed and deployed 33 modular REST endpoints supporting assessment workflows, AI-assisted assessment generation and personalized learning pathways.
- Applied Pydantic request and response validation to enforce API schemas and standardize payload structures between services.
- Implemented Firebase JWT authentication, protected-route middleware and role-based authorization to control access to application features.

Job Hunter – Automated Job Discovery Live Demo | GitHub
Python, Flask, PostgreSQL, Supabase, GitHub Actions

- Built a job-ingestion pipeline with modular parsing adapters for 114 company career-page sources across 9 applicant tracking system platforms.
- Integrated PostgreSQL/Supabase data storage, configurable filters and AI-assisted profile scoring to store and evaluate job listings.
- Implemented error handling and exponential retry backoff. Wrote tests for data extraction, persistence integrity and network-failure recovery.

DineEase – Restaurant Ordering System Live Demo | GitHub
React, Node.js, Express.js, MongoDB

- Developed a full-stack ordering application with catalog browsing, cart management, checkout and role-protected administrator dashboards.
- Synchronized cart and checkout state with MongoDB to retain order data across client sessions and support order-processing workflows.
- Wrote 35 automated tests covering order calculations, order-payload handling and route protection.

Achievements & Leadership

- **National Finalist, Hack Celestial 2.0:** Reached the national finals with Edvanta in a competition with 320+ participating teams.
- **Co-organizer, UniMerge 1.0:** Coordinated technical operations, submission validation and developer support for a national hackathon with 130+ participants.
